## Digest

---

U.S. agricultural exports of \$5.1 billion to all world areas in fiscal year 1963 were only 1 percent below a year earlier. But they declined to all areas except for a \$219 million increase in Asia and a \$14 million gain in Latin America, reflecting mainly larger exports under Government-financed programs. Reduced U.S. cotton exports to the industrialized countries of Western Europe accounted for a substantial part of the decline in agricultural exports to that area.

There has been a gradual shift in the pattern of U.S. agricultural exports in recent years. The share going to Europe fell to a postwar low of 43 percent in fiscal year 1963 from a high of 52 percent in 1956-57 during the Suez crisis. Exports to Asia, increasing in absolute amount and in share, totaled \$1,528 million, or 30 percent of the total. The relatively slow economic growth and low level of foreign exchange reserves in Latin America largely explain the low volume of exports to this area. Latin America accounted for only 9 percent of U.S. agricultural exports in fiscal year 1963. Shipments to Africa failed to expand for the first time in the 6-year period. However, the share moving to Africa increased to 7 percent in fiscal year 1963 from 2 percent in fiscal year 1958.

\* \* \* \* \*

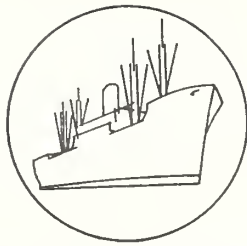

July-November 1963 agricultural exports are estimated at \$2,379 million, 19 percent more than a year earlier. Gains occurred in wheat and flour, cotton, corn, soybeans, tobacco, vegetables, animal fats, and dairy products. There were only slight declines for hides and skins, oats, barley, and cottonseed oil.

\* \* \* \* \*

U.S. agricultural exports to the European Economic Community increased to \$389 million in July-October 1963 from \$343 million for the same period a year earlier. Exports of commodities subject to variable levies totaled \$119 million, only \$1 million above the same period in 1962. Commodities not subject to variable import levies totaled \$270 million, representing a 19 percent increase, with larger exports of cotton, fruits, vegetables, animal fats, and tobacco.

# NOTICE

Effective September 1963, U.S. import statistics are being compiled on the basis of the Tariff Schedules of The United States Annotated, a new commodity classification system that is not comparable with the previous Schedule A system used for many years. Until the agricultural components of this new system can be identified and tabulated, publication of agricultural import statistics in this report is suspended.

### U.S. AGRICULTURAL EXPORTS UP TO ASIA AND LATIN AMERICA BUT DOWN ELSEWHERE IN 1962-63

by

Dewain H. Rahe 1/

U.S. agricultural exports in fiscal year 1963 totaled \$5,078 million (revised) compared with the previous year's record of \$5,141 million. Agricultural exports in fiscal year 1963 declined to all world areas except for increases of \$219 million to Asia and \$14 million to Latin America, reflecting mainly larger exports under Government-financed programs.

A reduced volume of U.S. cotton exports to the industrialized countries of Western Europe accounted for a substantial part of the decline in exports to that area. Cotton exports were down to an unusual low of 3.6 million bales, largely as a result of (1) the 2 million bale gain in foreign free world production, (2) some decline in world consumption, and (3) greater reliance on stocks in manufacturing countries.

Exports to Latin America, which had dropped precipitously from 1959-60 to 1960-61 with the loss of the Cuban market, showed notable gains for the following 2 years, due in part to larger shipments under Government-financed programs in connection with the Alliance for Progress program. An 11 percent decline in agricultural exports to Africa in fiscal year 1962-63, the first in recent years, reflected smaller shipments under Government-financed programs, mainly to UAR-Egypt. Smaller cotton shipments to Australia accounted for the slight decline in shipments to Oceania. Exports to Oceania have been stable the past 5 years, averaging just over \$40 million annually.

Exports to Canada, valued at \$517 million, were essentially at the same level as the \$521 million a year earlier. The Canadian total includes intransit grains and soybeans used to finish loading ships moving through the St. Lawrence Seaway from Canadian ports.

U.S. agricultural exports in the past 5 years have shown a gradual uptrend to all world areas -- especially developing areas. Exports in fiscal year 1958-59 totaled only \$3.7 billion compared with \$5.1 billion for 1961-62 and 1962-63. In the past 5 years there has been a rapid gain in foreign demand for food and fiber. Rapid economic growth in the industrialized countries has resulted in

---

1/ Agricultural Economist, Trade Statistics and Analysis Branch, Development and Trade Analysis Division, Economic Research Service.

a substantial increase in demand for agricultural products. Since 1957-58 industrial production in Western Europe increased about 30 percent; and in Japan, about 100 percent. Increased business and economic activity has resulted in increased disposable incomes permitting consumers to purchase more luxury-type foods. These factors promoted larger U.S. exports of feed grains, soybeans, soybean meal (for expanded livestock feeding), meat products, fruits, and vegetables.

The newly-developing countries, lacking sufficient gold and dollar reserves to purchase U.S. agricultural products for dollars, obtained farm products from the United States under various Government export programs. Since 1957-58, Government-financed shipments to newly-developing countries, in the form of sales for foreign currency, emergency grants, and donations, have accounted for about 30 percent of the total. These programs permitted many newly-developing countries to concentrate on industrial production and helped to prevent inflation from retarding economic development.

Throughout 1957-58 to 1962-63, the United States had plentiful supplies of high quality farm products available for world markets, but fluctuations in foreign agricultural production, changing demands of foreign consumers, and other economic and political conditions resulted in moderate fluctuations in U.S. agricultural exports during these years.

Except in the newly-developing countries there were few problems in foreign gold and dollar reserves to limit the level of U.S. agricultural exports. In fact, most industrial countries had record quantities of gold and dollars during the past 6 years. Contributing to the high level of U.S. exports during this period were the generally competitive U.S. prices for cotton, wheat, feed grains, rice, and several other commodities. The marked shrinkage in cotton exports in 1958-59 reflected a special situation in which U.S. cotton was not priced to meet foreign competition.

Exports by area. The pattern of U.S. agricultural exports has shifted gradually in recent years (table 1). Exports to Europe declined to \$2,169 million in fiscal year 1962-63 from \$2,415 million a year earlier. The share of U.S. exports to Europe fell to a postwar low of 43 percent in fiscal year 1962-63 from the high of 52 percent in 1956-57. During 1957, Government-financed programs accounted for a large share of U.S. exports to Western Europe, but in fiscal year 1962-63, program exports accounted for only 13 percent of U.S. agricultural shipments to this area.

U.S. agricultural exports to Asia since fiscal year 1957-58 have increased both in absolute amount and in share of total shipments. The most recent fiscal year's total, \$1,528 million, represented 30 percent of U.S. exports of farm commodities compared with 26 percent, or \$1,309 million in 1961-62. About 52 percent of exports to Asia moved under Government-financed programs -- primarily to India, Pakistan, Indonesia, and other newly-developing countries. Asia's advancing industrial economies, particularly Japan, contributed a substantial share to the increase in U.S. dollar sales.

Exports of U.S. farm products to Canada in fiscal year 1963 totaled \$517 million, including \$100 million of intransit shipments, compared with the 1958 total of \$345 million.

1/ Includes intransit commodities placed in bonded storage in Canada and used to "top off" ships moving through the St. Lawrence Seaway: Estimated at \$35 million in 1959-60, \$60 million in 1960-61, \$90 million in 1961-62, and \$100 million in 1962-63.

The relatively slow economic growth and low level of foreign exchange reserves in Latin America largely explain the gradual decline in U.S. exports to this area. Although agriculture remains the principal sector in the economies of most Latin American countries, the need for U.S. products continues mainly because much of Latin America produces tropical products and has been unable to expand other agricultural production to supply an increased demand for food by the growing urban population. The decline in exports since fiscal year 1960 represents mainly the loss of the Cuban market. Last fiscal year, exports to Latin America increased to \$486 million from the previous year's \$472 million. About 36 percent of exports to Latin America were under Government-financed programs.

U.S. agricultural exports to Africa in fiscal year 1963 declined for the first time in the 6-year period. The reduction reflected mainly smaller shipments to UAR-Egypt under Government-financed programs. Fiscal year 1958 exports to Africa amounted to only \$74 million while Africa's imports in 1963 accounted for \$337 million, or 7 percent of all U.S. agricultural exports. Government-financed programs, mainly P.L. 480 Title I sales for foreign currency, represented 82 percent of Africa's fiscal year 1963 purchases of U.S. farm commodities.

Fiscal year 1963 U.S. exports of farm products to Oceania, principally Australia, were down to \$41 million from \$48 million 5 years earlier. Principal commodity changes were declines of over \$4 million in cotton and nearly \$10 million in tobacco. Gains in exports of protein meal, fruits, vegetables, nuts, and vegetable fats and oils overcame nearly half the combined tobacco and cotton losses. The slight decline in exports in fiscal year 1963 from 1962 reflected mainly lower values of U.S. shipments of cotton, vegetables, and vegetable fats and oils. Throughout the 6-year period, relatively large percentage increases in U.S. exports were registered for Australia, New Guinea, the British Western Pacific Islands, and the French Pacific Islands. In absolute terms, however, exports to these areas still were comparatively insignificant, with the total moving up to \$1,834,000 in 1963 from \$448,000 in 1958.

#### Exports to the European Economic Community

U.S. agricultural exports of \$1,069 million to the European Economic Community (EEC) in fiscal year 1963 represented a 10 percent decline from the previous year's \$1,184 million. Principal declines occurred in wheat and wheat flour and poultry meat, commodities subject to the common agricultural policy (CAP) system of variable levies for most of fiscal year 1963 (table 2). Exports of U.S. commodities subject to the variable import levies were down 25 percent.

Commodities not subject to the variable levy system declined only slightly in fiscal year 1963 from a year earlier. Sharp increases in exports of fruits, vegetables, soybeans, protein meal, and rye offset major declines in cotton, tallow, pork, rice, and edible vegetable oils. Exports of cotton fell to \$87 million from \$157 million a year earlier mainly because of a 2 million bale rise in cotton production in the foreign free world and some decline in EEC cotton consumption.

Exports of wheat to the EEC totaled only \$39 million in fiscal year 1963 compared with \$114 million a year earlier. The decline resulted mainly from the improved 1962 harvest in the EEC area. The variable import levy for wheat flour nearly eliminated U.S. flour from the Netherlands market, hitherto an important dollar outlet. Exports of wheat flour to the EEC totaled \$10 million in 1963 compared with \$17 million a year earlier. Most of the 1963 flour shipments were under P.L. 480 Titles II and III for Italy's school lunch program and other relief projects.

The relatively high variable levies sharply limited EEC imports of U.S. poultry meat. U.S. poultry meat shipments to West Germany, the most important EEC market, were subject to levies of 12.5 cents per pound, up from 4.5 cents prior to the imposition of the variable levy system.

Feed grain exports to the EEC totaled \$274 million in fiscal year 1963 compared with \$272 million a year earlier. Exports of feed grains prior to April 1963 were running well above the previous year, reflecting poor corn crops in France and Italy, trade liberalization by Italy, and reduced shipments from other major producers. The primary reason for the overall increase in the EEC's demand for feed grains in the past 6 years has been the rapid expansion of its livestock industry. Exports of feed grains to the EEC in 1958 totaled only \$115 million.

Table 2.--U.S. agricultural exports to the European Economic Community:  
Value by commodity, fiscal years 1961-62 and 1962-63 1/

Total.....	715,436	716,569	0
Total.....	1,184,449	1,070,135	-10

1/ The variable import levies were imposed effective July 30, 1962.

2/ Exports of wheat flour to Italy include donations under Title II and III of P.L. 480.

3/ Although pork is a variable-levy commodity, the imposition of the levy on pork variety meats -- the kind exported by the United States -- has been postponed.

EEC consists of Belgium, France, Italy, Luxembourg, Netherlands, and West Germany as full members and Greece as an associate. Trade statistics for Belgium and Luxembourg are not compiled separately since these countries are organized into a customs unit.

#### Exports decline to all member countries of EEC

Exports to each EEC country declined in fiscal year 1963 from a year earlier (table 3 and fig. 1). U.S. exports to Belgium declined to \$119 million from \$130 million because of smaller shipments of wheat and flour, feed grains, cotton, and animal fats. Gains occurred in exports of rice, tobacco, oilseeds, protein meal, fruits, vegetables, and dairy products.

Exports to the Netherlands, the next largest outlet for U.S. products, declined only slightly. Gains in exports of feed grains, tobacco, oilseeds, protein meal, vegetables, and dairy products nearly counterbalanced declines in wheat and flour, cotton, fruits, animal fats, poultry meat, and hides and skins. The principal decline in wheat flour resulted from the imposition on July 30, 1962, of the variable levies on flour.

France, 16th in the list of leading markets for U.S. farm products, took less wheat and flour, feed grains, cotton, fruits, animal fats, and hides and skins. Increases to France were in protein meal, oilseeds, vegetables, meat products (not poultry), tobacco, rice, and dairy products.

The decline in exports to Italy reflected smaller exports of wheat and flour, cotton, and animal fats. Partially offsetting were substantial gains in feed grains, protein meal, tobacco, fruits, vegetables, and dairy products.

The sharp drop in exports to West Germany reflected large declines in exports of all principal agricultural commodities except oilseeds, protein meal, vegetables, fruits, and dairy products. Shipments of these items showed moderate increases.

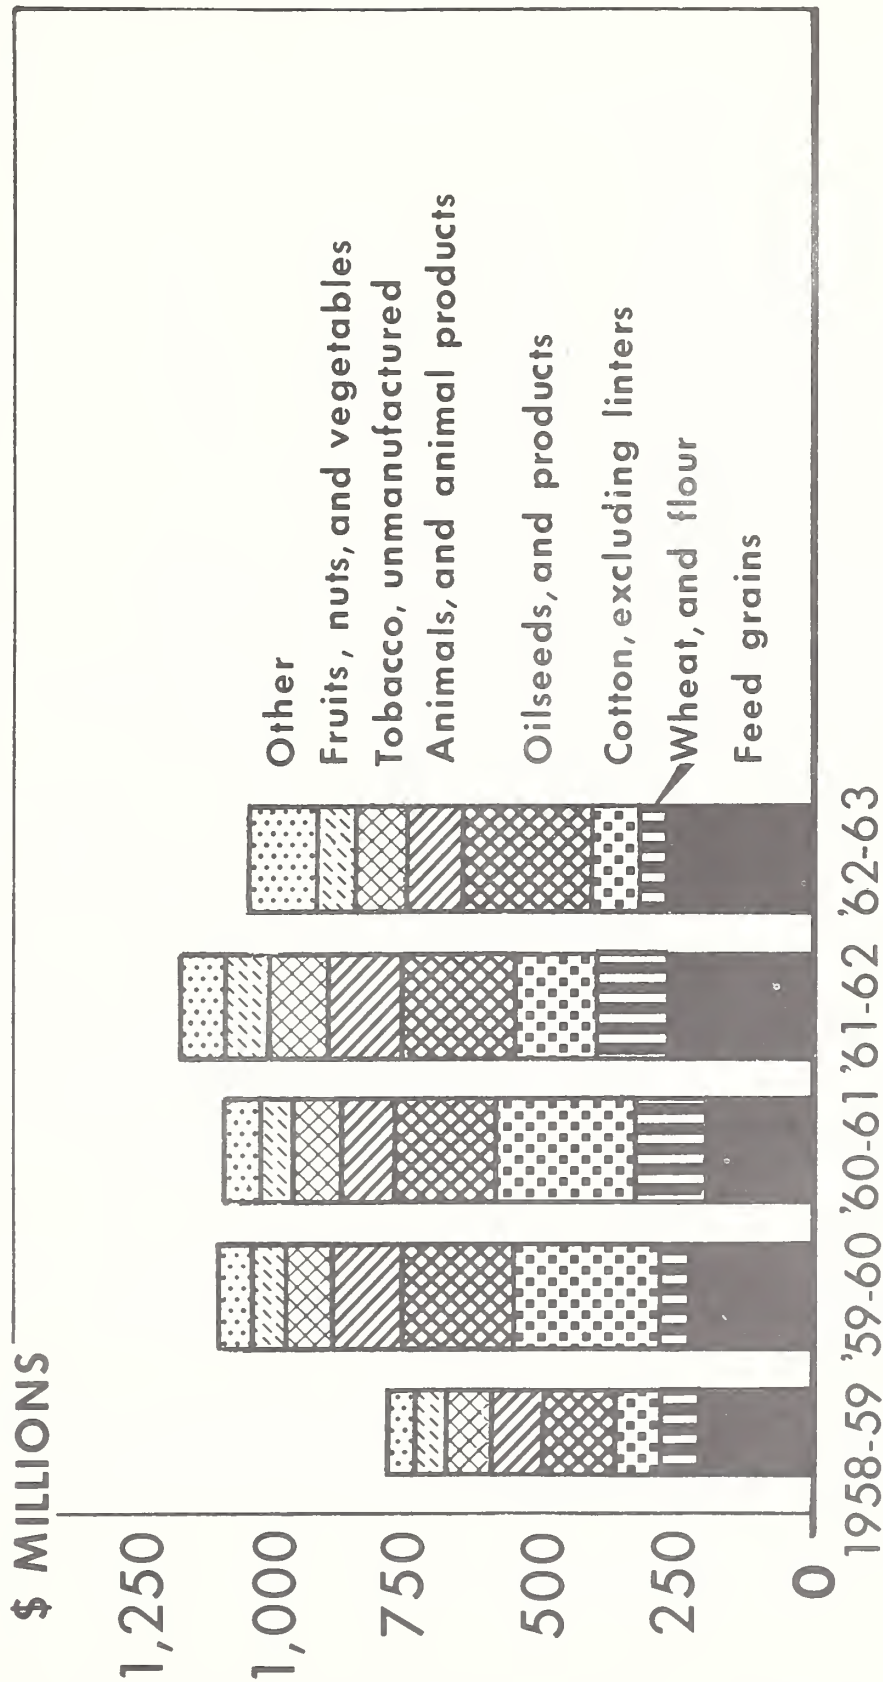

As foreign outlets for U.S. agricultural exports, members of the EEC ranked from 5th for West Germany through 16th for France.

#### Exports to the European Free Trade Association

Exports to the European Free Trade Association (EFTA) declined \$110 million in fiscal year 1963 from a year earlier (from \$719 million to \$609 million) (table 4). Principal declines were concentrated in wheat including flour, feed grains, cotton, and tobacco. Increases were reported for oilseeds, vegetables, protein meal, and dairy products. Exports to EFTA were smaller than in 1963 only in 1959 when exports of cotton and oilseeds were unusually small. Members of EFTA are the United Kingdom, Austria, Denmark, Norway, Portugal, Sweden, and Switzerland. Finland is an associate member. U.S. exports to the United Kingdom, the third ranking market for U.S. agricultural products, accounted for 60 percent of U.S. agricultural exports to EFTA.

# U.S. AGRICULTURAL EXPORTS TO EEC BY MAJOR COMMODITY GROUPS\*

\* EUROPEAN ECONOMIC COMMUNITY (EEC) INCLUDES BELGIUM • LUXEMBOURG, FRANCE, ITALY, NETHERLANDS AND WEST GERMANY.

Table 3.--U.S. agricultural exports to the European Economic Community: Value by country, fiscal years 1957-58 through 1962-63

Country	1957-58	1958-59	1959-60	1960-61	1961-62	1962-63
-- Million dollars --						
Belgium and Luxembourg.....	120	105	134	131	130	119
France.....	65	65	119	112	99	85
Italy.....	155	106	155	213	192	173
Netherlands.....	210	242	339	324	348	344
West Germany.....	326	273	374	320	415	348
Total.....	876	791	1,121	1,100	1,184	1,069

U.S. sales of farm products to the United Kingdom, at \$367 million in 1962-63, were down \$93 million from the previous year and slightly below 1958-59. Except for dips in those 2 fiscal years, exports to the United Kingdom have been remarkably uniform, with the 4-year average equaling the 1962-63 level of \$460 million. The British market for U.S. farm commodities in 1962-63 took less of all the principal farm products except oilseeds, which gained moderately, and rice, meats, and hides and skins, which increased slightly.

The United Kingdom accounted for \$93 million of the net decline of \$110 million in U.S. agricultural exports to EFTA members from fiscal year 1962 to 1963. Of the \$17 million net loss of exports to the other 6 nations, increases to Denmark (\$14 million) and Norway (\$2 million) offset about half the decreases to Portugal (\$11 million), Switzerland (\$11 million), Austria (\$8 million), and Sweden (\$3 million).

The larger exports to Denmark resulted from increased purchases of oilseeds, protein meal, dairy products, and vegetables. U.S. feed grain shipments to Denmark decreased slightly. Norway's slight increase in takings from the United States reflected small gains in protein meal, oilseeds, and feed grains largely offset by a sizable decline in wheat and flour purchases.

Decreased exports to Portugal and Switzerland reflected mainly moderate declines in cotton and wheat and flour sales. These countries increased their purchases of U.S. oilseeds, dairy products, and vegetables. Decreased exports to Austria and Sweden were reflected chiefly in smaller sales of cotton, feed grains, and tobacco.

For EFTA as a whole, U.S. exports of farm products in fiscal year 1963 were larger than in the previous year for oilseeds, protein meal, vegetables, and dairy products and smaller for wheat and flour, feed grains, cotton, tobacco, and fruits.

Table 4.--U.S. agricultural exports to the European Free Trade Association:  
Value by country, fiscal years 1957-58 through 1962-63

Total.....	643	562	697	690	719	609

#### Exports to Leading Country Markets

The only new name in the list of the 10 leading U.S. export markets in 1962-63 was 10th place Yugoslavia, replacing Belgium, which moved down to 12th place (fig. 2). For the second successive fiscal year, overall U.S. agricultural shipments to Canada were greater than to any other country. However, after allowance for intransit shipments through Canada via the St. Lawrence Seaway en route to foreign ports, Japan was the leading export market for U.S. farm products in 1962-63.

Oilseeds led the list of commodities sent to Japan. Increased exports were reported also for feed grains, fruits, vegetables, nuts, dairy products, and hides and skins. Continued reductions were noted for cotton and animal fats and oils. Exports of wheat and flour and tobacco, significant items of trade with Japan, were at levels comparable with a year earlier.

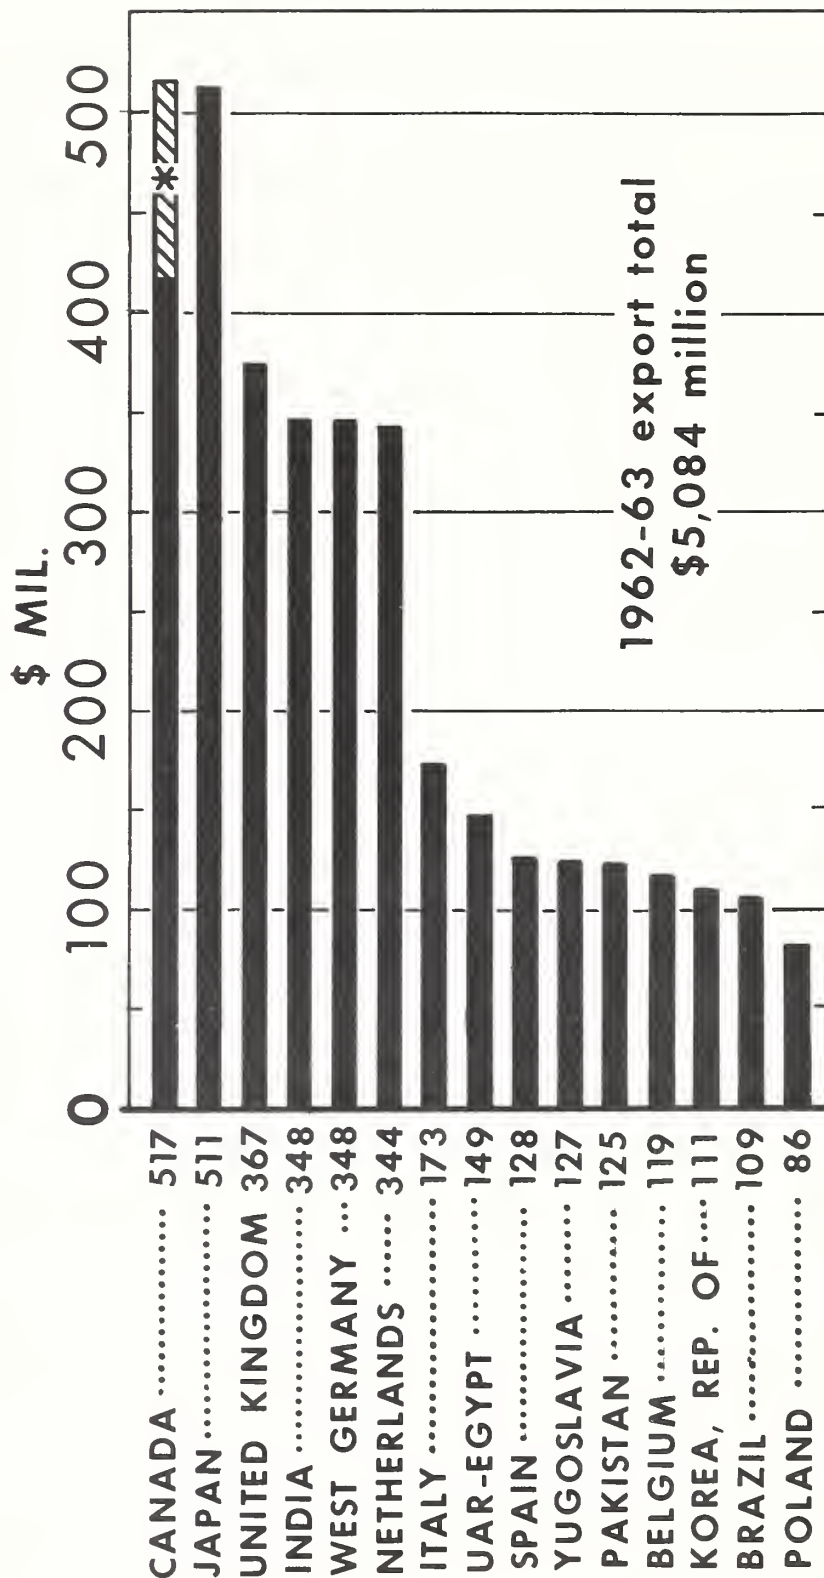

Agricultural exports to India reached a peak in fiscal year 1963 and made the country the fourth largest outlet for U.S. agricultural commodities. Increased shipments were recorded for every principal farm commodity except an insignificant decline in feed grain sales.

Slightly larger purchases of tobacco, vegetables, animal fats and oils, and dairy products by UAR-Egypt failed to offset decreases in feed grains and vegetable fats and oils, leaving overall U.S. agricultural exports to this country at a level moderately lower than in fiscal year 1962.

Spain's purchases of U.S. farm products in fiscal year 1963 were up slightly from the previous year but still about 20 percent below the high in 1960-61. Larger shipments of feed grains, protein meal, and vegetable fats and oils were mainly offset by large declines in cotton and wheat and flour exports.

Exports to Yugoslavia reached a 6-year high, with gains in wheat and flour, cotton, protein meal, and dairy products. Exports rose to \$127 million in 1963 from \$38 million in 1960.

1/ Includes food exported for relief or charity by individuals and private agencies.

2/ Feed grains: Barley, corn, oats, and grain sorghums, excluding products.

3/ Excludes essential oils which are included in "other".

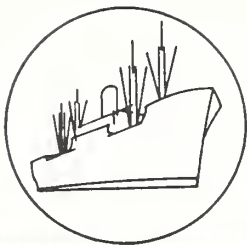

4/ Other commodities: Mainly feeds and fodders, field and garden seeds, coffee, hops, essential oils, sugar and related products, and live animals.

5/ Less than \$500.

6/ Not separately classified prior to 1958.

7/ The European Economic Community (Common Market) includes the Netherlands, Belgium and Luxembourg, France, West Germany, and Italy.

8/ The European Free Trade Association includes the United Kingdom, Denmark, Switzerland, Sweden, Norway, Austria, and Portugal.

# Export Fact Sheet

FISCAL YEAR 1962-63

U.S. agricultural exports in fiscal year 1962-63 were slightly below record. Value totaled \$5,084 million, 1 percent below the record in 1961-62. Volume about equaled the previous year's record. The export value was equivalent to one-seventh of cash receipts from farm marketings totaling \$35,921 million.

One acre out of every 5 harvested for export. The output of 63 million acres of U.S. cropland moved abroad in 1962-63. Exports accounted for over half of the output of wheat, rice, dried edible peas, and hops; over two-fifths of the production of soybeans including oil, nonfat dry milk, and tallow; over one-fourth the output of prunes, raisins, cotton, tobacco, feed grains; and one-fifth of dry edible bean, lard, and cottonseed production.

The United States is the world's largest exporter of farm products. U.S. farmers in 1963 supplied about one-fifth of the world's agricultural exports. U.S. agricultural exports in 1962-63 required financing, inland transportation, storage, and ocean transportation for 44.6 million long tons of cargo -- enough to fill over 1 million freight cars or 4,500 cargo ships. In moving these exports, an average of 12 ships departed each day.

Exports are assisted by Government programs. Of the \$5.1 billion of U.S. agricultural exports in 1962-63, a record \$3.6 billion were commercial sales for dollars, and \$1.5 billion moved under P.L. 480 and AID programs (foreign currency sales, donations, barter, and long-term supply and dollar credit sales). Moreover, so that major products such as wheat, cotton, and at times feed grains could compete in world markets, the Commodity Credit Corporation (CCC) made export payments to exporters in cash or in kind or sold stocks at less than domestic prices. An estimated \$1.7 billion of exports moved in this way (with \$1.0 billion moving under Government-financed programs, mainly P.L. 480, and \$0.7 billion as sales for dollars). This export assistance, principally in the form of export payments, was valued at about \$628 million (amount not included in the value of agricultural exports).

Recent export gains stemmed mainly from dollars sales. U.S. agricultural exports averaged \$1.3 billion higher in the 3 years ended June 30, 1963, than in the 3 years ended June 30, 1957 (the first 3 years of P.L. 480). About 85 percent of the rise was in commercial sales for dollars; 15 percent in P.L. 480 and AID programs. Exports under programs and commercial sales are shown in the following table:

Table 7.--U.S. agricultural exports: Value of commercial sales for dollars and Government programs, years ended June 30, 1951-63

Year ended June 30	Total exports	Com'l. sales :f/dols. 1/	Under Govt. :progs. 2/	Year ended June 30	Total exports	Com'l. sales :f/dols. 1/	Under Govt. :progs. 2/

:	:	:	:	1963....	5,084	3,545	1,539

1/ "Commercial sales for dollars" include, in addition to unassisted commercial transactions, shipments of some commodities with Governmental assistance in the form of (1) credits for relatively short periods; (2) sales of Government-owned commodities at less-than-domestic market prices; and (3) export payments in cash or in kind. 2/ Sales for foreign currency, barter, and donations.

Exports by Commodities (Fiscal Year 1962-63 except where noted)

**WHEAT** Near-record exports of wheat grain and grain equivalent of flour: 638 million bushels valued at \$1,158 million; 76 percent (quantity) was under P.L. 480 and AID programs. Exports were 58 percent of U.S. 1962 wheat production and two-fifths of world exports.

**FEED GRAINS** New export record for combined volume of barley, corn, grain sorghums, and oats: 15.4 million metric tons, including major products, valued at \$772 million; 12 percent (value) moved under P.L. 480 and AID programs. Exports were 26 percent of U.S. 1962 feed grain sales by farmers and about half of world feed grain exports. U.S. corn exports were the largest on record.

**COTTON** Exports of 3,632,000 running bales valued at \$492 million; one-third (quantity) moved under P.L. 480 and AID programs. Exports were one-fourth of U.S. 1962 season cotton production and 21 percent of world cotton exports (August 1962-July 1963).

**TOBACCO** Export weight of 474 million pounds valued at \$378 million, 10 percent (quantity) moved under P.L. 480 and AID programs. Exports were 24 percent of U.S. 1962 tobacco crop and 28 percent of free world tobacco exports (calendar year 1962).

**SOYBEANS** New export record of 171 million bushels valued at \$442 million; 2 percent (quantity) moved under P.L. 480 and AID programs. Although included under the price support program, soybeans moved abroad without export payment, because world prices have been above the domestic market.

Exports were one-fourth of the U.S. 1962 soybean crop and 89 percent of world soybean exports (calendar year 1962). Including oil, exports were 44 percent of the U.S. 1962 crop.

FRUITS AND PREPARATIONS Near-record export value: \$280 million; less than 1 percent (value) moved under Government programs. Export value was about one-fifth of U.S. 1962 commercial sales. It included \$110 million of fresh fruits, \$77 million of canned fruits, \$42 million of dried fruits, and \$43 million of fruit juices.

SOYBEAN AND COTTONSEED OILS Exports of 1,737 million pounds (71 percent soybean oil and 29 percent cottonseed oil) valued at \$198 million; 40 percent (quantity) moved under P.L. 480 and AID programs. Exports included 124 million pounds not separately reported in official Bureau of the Census trade statistics. Exports were over two-fifths of U.S. 1962 production of oil. Soybean and cottonseed oils, plus oil equivalent of exported seeds, represented about 92 percent of world exports of these oils (calendar year 1962).

VEGETABLES AND PREPARATIONS Export value of \$162 million; less than 1 percent (value) moved under Government-financed programs. Export value, about 8 percent of U.S. commercial sales, included \$53 million of fresh vegetables, \$32 million of canned vegetables, and \$45 million of dried peas and beans.

RICE Exports of 24.2 million bags (milled rice) valued at \$164 million; 58 percent (quantity) moved under P.L. 480 and AID programs. Exports were 54 percent of U.S. 1962 rice production and 15 percent of world rice exports (calendar year 1962).

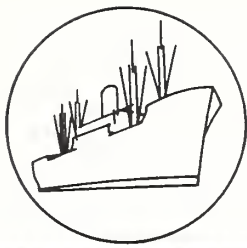

DAIRY PRODUCTS Exports valued at \$154 million; 68 percent (value) moved under export programs. Exports were about 1 percent of U.S. milk output (calendar year 1962). They included 991 million pounds of nonfat dry milk, 38 million pounds of cheese, and 119 million pounds of evaporated milk.

TALLOW AND INEDIBLE GREASES Exports of 1.7 billion pounds valued at \$105 million; 17 percent (quantity) moved under Government programs. Exports were about two-fifths of U.S. production and 68 percent of world exports (calendar year 1962).

POULTRY AND PRODUCTS Exports of \$70 million of poultry and poultry products; less than 1 percent (value) moved under Government programs. They included 196 million pounds of poultry meat, about 4 percent of U.S. output and more than two-fifths of world exports (calendar year 1962); 15 million dozen eggs, less than 1 percent of U.S. output; 23 million day-old chicks; and 5.2 million pounds of egg solids.

HIDES AND SKINS	Record exports of 11.6 million pieces valued at \$79 million, mainly cattle hides. Exports were one-fourth of U.S. output (calendar year 1962).
LARD	Exports of 444 million pounds valued at \$41 million, nearly all shipped commercially for dollars. Exports were 18 percent of U.S. production and 60 percent of world exports (calendar year 1962).
VARIETY MEATS	Record exports of 144 million pounds valued at \$28 million. Exports -- mainly beef and pork livers and beef tongues -- were 6 percent of U.S. variety meat output (calendar year 1962).

# Export Highlights

---

JULY-NOVEMBER 1963

U.S. agricultural exports totaling an estimated \$2,379 million in July-November 1963 were 19 percent ahead of the \$1,998 million in the same period a year earlier. The 1963 figure includes actual exports of \$1,804 million for July-October and an estimate of \$575 million for November. Based on the rate of gain compared with last year, U.S. agricultural exports were at an annual rate of \$6.0 billion. The export gain in the first 5 months reflected substantial increases in exports of wheat and flour, cotton, corn, soybeans, tobacco, vegetables, animal fats, and dairy products. Value declines were noted only for such products as hides and skins, oats, barley, and cottonseed oil (table 8).

U.S. agricultural exports to the European Economic Community (EEC) in July-October 1963 totaled \$389 million compared with the previous year's \$343 million (table 9). Exports of commodities subject to the Common Market's variable levies totaled \$119 million compared with \$118 million a year earlier.

U.S. exports of commodities subject to variable import levies as a group will probably be up sharply this year, reflecting substantially larger wheat purchases by the EEC. However, exports of poultry meat will likely continue below amounts shipped prior to the imposition of the variable import levies. Exports of other levy commodities are expected to show little further change in fiscal year 1964 compared with the impact that occurred last year. In the long run, however, the variable import levies will tend to make most subject U.S. commodities less competitive in the EEC market.

Exports of commodities not subject to variable import levies showed a 20 percent increase with larger shipments of cotton and linters, fruits and vegetables, animal fats, and tobacco. There were smaller exports of rice and soybeans.

Animals and animal products. Exports of animals and animal products in July-November were one-fourth above the level of the same period a year earlier. Exports rose to \$297 million in July-November 1963 from \$238 million for the same months a year ago. A substantial part of the increase in animal products resulted from larger exports of animal fats, meat products, and dairy products. The advance in exports of dairy products reflected sales of CCC butter at competitive prices to Western Europe. Exports of meat products rose mainly because of larger sales of variety meats from larger U.S. supplies at relatively low prices. The volume of hides and skins shipped abroad was up sharply, but lower prices resulted in an overall value decline of 14 percent. Exports of poultry products increased 12 percent, reflecting larger shipments of turkey meat to Western Europe and some increase in exports of poultry meat to areas other than the Common Market.

<sup>1/</sup> The variable import levies were imposed effective July 30, 1962. Comparisons are given for August-October as well as for July-October to show the impact of these levies on U.S. agricultural exports since the levies were imposed and for the fiscal year to date.

<sup>2/</sup> Exports of wheat flour to Italy include donations under Title II and III of P.L. 480.

<sup>3/</sup> Although pork is a variable-levy commodity, the imposition of the levy on pork variety meats -- the kind exported by the United States -- has been postponed.

Cotton. Exports of cotton, excluding linters, totaled an estimated 1,802,000 running bales in July-November compared with 1,222,000 bales for the same period a year earlier. Recent U.S. cotton exports have benefited from the smaller cotton production in the foreign free world, reduced cotton stocks in both exporting and importing countries, and the new CCC program that permits exports of cotton from CCC stocks at competitive prices. In addition, cotton consumption in Western Europe and Japan is increasing.

Grains and preparations. Among the grains and preparations, exports of wheat and flour totaled an estimated 313 million bushels in July-November 1963 compared with 221 million for the same months a year earlier. Adverse weather in Western Europe and the Soviet Bloc has increased the demand for wheat and flour in these areas. Production in Western Europe this year was estimated to be 300 million bushels less than the record output a year earlier, with reductions occurring mainly in France, Italy, and the United Kingdom. Moreover, the wheat in Western Europe was of relatively low quality and much has had to be used for feed.

Rice exports totaled an estimated 7.7 million bags in July-November 1963 compared with 7.6 million for the same period a year earlier. Most of the rise occurred in shipments under Government-financed programs, mainly to the newly-developing countries of Asia and Africa.

Exports of feed grains rose to 6.2 million metric tons in July-November 1963 from 6 million in the same months a year earlier. Value increased by 13 percent, reflecting higher grain prices this year. Exports to the EEC accounted for about one-third of total feed grain shipments in this period. U.S. exports of feed grains this year are benefiting from increased livestock production in both Western Europe and Japan. Moreover, grain production in some of the competitive exporting countries was somewhat limited this year.

Fruits and preparations. July-November exports of fruits and preparations totaled \$139 million compared with \$134 million a year earlier. The increase reflected larger exports of dried fruits, mainly raisins. There were also some increases in exports of canned fruits.

Oilseeds and products. Exports of oilseeds and products rose to \$351 million in July-November from \$322 million a year earlier. The 9 percent increase reflected principally larger exports of soybeans, flaxseed, and protein meal. Exports are benefiting this year from a substantial increase in demand for oils and protein meal in Western Europe and Japan. In addition, foreign output has not been able to keep up with the rapid gain in demand for these products. Soybean supplies from Communist China continue to be available only in small volume.

Tobacco. Exports of unmanufactured tobacco totaled an estimated 270 million pounds in July-November 1963 compared with 246 million for the like period a year earlier. U.S. exports this year are benefiting from the high quality 1963 tobacco crop, smaller production in some major producing countries, and the relatively low stock position of U.S. leaf in a number of important markets.

Vegetables and preparations. Exports of vegetables and preparations in July-November 1963 totaled an estimated \$66 million compared with \$59 million in the like period a year earlier. Most of the increase resulted from larger exports of dry edible beans, primarily to Western Europe, reflecting the relatively poor crop in the Danube Basin in the past year. Exports of processed vegetables will continue heavy in the coming year, especially to Canada and Western Europe.

<b>TOTAL NONAGRICULTURAL EXPORTS .....</b>							
<b>TOTAL EXPORTS, ALL COMMODITIES .....</b>							

1/ Preliminary.

2/ Reported in value only.

3/ Excludes the number of "other hides and skins", reported in value only.

## Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in-transit through the United States from one foreign country to another when documented as such through U.S. Customs.

**EXPORTS** The export statistics also exclude shipments to the U.S. armed forces for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 87-195 (Act for International Development), principally sales for foreign currency; under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at time of shipments from the United States, to which the commodities are to be shipped in their present form. Export shipments valued \$100-\$499 are included on the basis of sampling estimates.

**IMPORTS** Imports for consumption consist of commodities released from U.S. Customs custody upon arrival, or entered into bonded manufacturing warehouse, or withdrawn from bonded storage warehouse for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
